

MEDICAL DERMATOLOGY

Acne
Acne vulgaris affects two-thirds of individuals and can lead to scarring. Early treatment is necessary, which may consist of topical treatments and medications, hormone therapy, laser and light therapy, and chemical peels. Acne scarring can be addressed with laser resurfacing, microneedling with PRP, and fillers.

Rosacea
Rosacea is characterized by sensitive, pink to red facial skin and occurs in men, women, and all skin tones. Some patients have broken vessels and/or acne lesions. Many patients find their rosacea is worsened with sun, heat, harsh skin care products, spicy foods, and alcohol. Along with medical therapies, laser and light treatments can control rosacea.

Precancerous lesions & skin cancer
Precancerous skin lesions (actinic keratosis or AK's) affect over 10 million Americans and may appear as rough, red, or crusted patches. One in three Americans will be affected by skin cancer. Pink and brown bumps or non-healing spots on the skin should be evaluated by a dermatologist.

Moles & melanoma
Moles of concern may be biopsied, shaved, or surgically removed. Melanoma is a life-threatening diagnosis requiring immediate treatment as survival is related to the thickness of the melanoma lesion. New or changing lesions require evaluation by a dermatologist.

Other dermatologic conditions
Our dermatologists also treat conditions such as rashes, eczema, warts, psoriasis, hives, cold sores, excessive sweating, and fungal infections. Treatment plans are comprehensive and often combine prescription medication(s), topical therapy, laser procedures, and surgical procedures as appropriate.

THE PEARL DERMATOLOGY
The Pearl Dermatology was founded in 2018 to provide the new standard of full-spectrum dermatologic care using the latest technological advances with an emphasis on patient safety to deliver superior patient results in an inviting, contemporary environment.

The Pearl Dermatology is conveniently located at the central point of the communities of River Oaks, Tanglewood, Galleria, & West University. The clinic is located on the 5th floor. Complimentary, covered parking is available on the 1st & 2nd floors. The Pearl Dermatology accepts most PPO plans.

For the convenience of our patients, our clinic offers flexible hours of operation:

Monday	8 am – 5 pm
Tuesday	8 am – 5 pm
Wednesday	8 am – 5 pm
Thursday	8 am – 5 pm
Friday	8 am – 5 pm

JENNIFER DEAVER MD, FAAD

Jennifer Deaver, MD is a triple-board certified dermatologist and cosmetic surgeon through the American Board of Dermatology, the American Board of Cosmetic Surgery in Dermatologic Cosmetic Surgery, and the American Board of Facial Cosmetic Surgery. She was born and raised in Houston, and graduated magna cum laude from Texas A&M University. In 2004, she graduated from Texas Tech Medical School where she was inducted into the AOA Medical Honors Society.

Dr. Deaver Peterson completed her dermatology residency training at Texas Tech in 2009. In 2010, she completed a prestigious laser and cosmetic surgery fellowship program at Cosmetic Laser Dermatology in La Jolla, CA. Since that time, she has served as a consultant, physician trainer, clinical investigator, and advisory board member for many of the leading cosmetic lasers, injectables, and cosmetic skin care companies.

TRACY KATZ MD, FAAD

Tracy Katz, MD is board-certified through the American Board of Dermatology and has practiced cosmetic and medical dermatology in her native Houston, TX for the past nine years. She attended The University of Texas at Austin and graduated with Honors with a degree in Government and Biology in 2002. She then attended the University of Texas Medical School in Houston from which she graduated in 2007.

Dr. Katz completed her dermatology residency at the University of Kansas in Kansas City, MO. She also completed a laser and cosmetic fellowship in Houston. Dr. Katz has served as clinical investigator and consultant for many of the leading medical dermatology and cosmetic dermatology companies which specialize in lasers, injectables, and skin care.

SERVICES MENU

THE PEARL
DERMATOLOGY

LASER, LIGHT, & SKIN TIGHTENING PROCEDURES

Ultherapy

Ultherapy is a non-surgical skin tightening treatment that helps improve the appearance of sagging skin and fine lines and wrinkles on the face, neck, and décolletage. This is an in office, no downtime procedure that is safe to use on all patients.

Morpheus

Morpheus combines radiofrequency technology with microneedling to address sagging skin, wrinkles, fine lines, and changes in skin texture.

Intense Pulsed Light (IPL) “Photofacial”

IPL is a light device that simultaneously targets and treats freckles, sunspots, redness, spider veins, and pore size. It can also help improve the appearance of rosacea, red scars, and tan scars with minimal to no downtime.

ResurFX Skin Resurfacing Laser

ResurFX is a fractionated skin laser that heats columns of skin tissue to improve fine lines, scars, stretch marks, brown spots, and freckles. ResurFX can produce redness and swelling typically lasting 2-3 days.

Photofractional Laser

Photofractional is a combination of IPL with ResurFX performed on the same day. This combo synergistically works to improve fine lines, scars, red stretch marks, brown spots, freckles, redness, and broken blood vessels. Photofractional can produce redness and swelling typically lasting 2-3 days.

Laser Skin Resurfacing with Ultrapulse CO₂

Fractionated CO₂ laser resurfacing creates fine channels in the skin to stimulate new collagen production to improve fine lines, wrinkles, pore size, and scars. Ultrapulse can tighten loose skin on the upper and lower eyelids. Finally, using the SCAARFx module, this laser treats thick scars to improve mobility and flexibility.

VBEAM Pulsed Dye Laser (PDL)

VBeam PDL is a vascular laser which reduces the appearance of rosacea, broken blood vessels, angiomas, red scars, hypertrophic (thick) scars, and vascular birthmarks.

LaseMD

LaseMD is a fractionated thulium laser which reduces brown spots, pore size, and melasma. Most patients can experience redness, bronzing, and swelling often lasting for 1-2 days.

Spectra Laser

Spectra is used to reduce pigment conditions such as melasma, sunspots, post-inflammatory hyperpigmentation, and/or dark colored tattoos with minimal to no downtime and great results. Pore size and acne can be improved with a series of Spectra treatments.

Photodynamic Therapy

Photodynamic Therapy (PDT) combines topical aminolevulinic acid (ALA) with a light source to improve severe acne, rosacea, and actinic keratosis (AKs). Patients undergo a series of treatments for optimal results and must avoid the sun for 36 hours post-treatment.

AccuTite

AccuTite is a minimally invasive skin tightening procedure that uses radiofrequency energy to tighten the skin and liquify fat cells that are absorbed by the body and then discarded. AccuTite is perfect for patients who might need, but may not be ready for surgery.

INJECTABLES

Botox & Dysport

Botox and Dysport are injected in order to temporarily relax and soften the wrinkles that are caused by overactive muscle movement. Most patients are treated every 3-4 months to preserve their results.

Hyaluronic Acid Fillers

A variety of hyaluronic acid(HA) fillers are available from the makers of Juvederm & Restylane. There are individual characteristics in these HA fillers based on their capacity to lift tissue, create structure, stretch with facial movement, fill lines or folds, and how much they may augment the lips. Common areas for filler treatment include the nasolabial folds, marionette lines, around the mouth, the lips, cheeks, chin, jawline, under eyes (tear troughs), temples, hands, and earlobes.

At The Pearl Dermatology we carry Restylane, Restylane Lyft, Restylane Silk, Restylane Refyne, Restylane Defyne, Restylane Kysse, Juvederm Ultra, Juvederm Ultra Plus, and Voluma. Our board-certified dermatologists, Dr. Katz and Dr. Deaver, will help create a customized filler plan based on your individual needs.

Sculptra Aesthetic

Sculptra stimulates your skin's own natural collagen production to increase overall facial volume and create a youthful appearance. Sculptra gradually works over time to create results that can last more than 2 years.

Kybella

Kybella is the only FDA-approved injectable treatment that destroys fat cells in the treatment area under the chin to improve your profile and reduce the appearance of submental fullness. Kybella is injected in a series of treatments every 1- 3 months and works by permanently dissolving unwanted fat.

HAIR ENHANCEMENT

Platelet Rich Plasma (PRP) Injections

PRP is mostly used to treat classic male pattern baldness and female pattern hair loss. When we inject PRP directly into the scalp, they act as stem cells and can stimulate the hair growth. Your dermatologist may also advise you to take a specific hair growth vitamin or use a topical treatment in addition to PRP.

Keralase

Keralase uses KeraFactor, a proprietary blend of growth factors & peptides, to promote hair growth. First, the LaseMD laser creates tiny, “microtunnels” in the scalp to increase the absorption of compounds. Then, KeraFactor serum is rubbed into the scalp. Patients receive 6 treatments, 2 weeks apart.

VEIN TREATMENTS

Sclerotherapy

Sclerotherapy is an injection treatment used to improve the appearance of unsightly leg veins. This procedure can be used for small spider veins, larger blue/green reticular veins, or bulging varicose veins.

OTHER COSMETIC TREATMENTS

Microneedling with PRP

Also known as the “vampire facial”, microneedling with PRP uses fine, sterile needles to create microscopic channels to help improve skin tone, fine lines, texture, & shallow scars. During the microneedling procedure your doctor applies your PRP directly to the skin to further stimulate collagen.

Heallite II

This red LED light can be used post-treatment to calm redness, bruising, treat sunburns, and skin irritations with no downtime or discomfort.

Chemical Peels

There a several chemical peels our doctors can choose from to help remove dead skin cells, exfoliate the most outer layer of the skin, and can help improve the appearance of acne and acne scarring.

BODY CONTOURING & PROCEDURES

CoolSculpting

CoolSculpting uses the process of cryolipolysis to non-surgically freeze unwanted fatty tissue in men & women. CoolSculpting is FDA-cleared to treat fatty tissue on the thighs, abdomen, flanks, arms, & under the chin that is resistant to diet & exercise. Most patients undergo 2 treatments, 30-45 days apart.

QWO

QWO is the first FDA approved treatment for cellulite in the buttocks. Cellulite affects over 90% of women and is unrelated to diet, weight, or activity level. QWO is injected in a series of 3 treatment spaced 3 weeks apart.

Ultherapy

Ultherapy uses ultrasound energy to create small zones of heat in the skin's deepest layers that produce a skin tightening effect. Ultherapy can be used on areas such as the chest, arms, knees, and abdomen.

Morpheus

Morpheus can also help tighten skin laxity and reduce unwanted fat on arms, knees, legs, and abdomen.

Sculptra for Crepiness & Buttock Augmentation

Sculptra can be used to stimulate collagen production and improve the appearance of skin laxity and crepiness on the arms, chest, and knees with a series of treatments spaced 1 month apart. It can also be used to augment areas such as the buttock. Results are seen in 3-6 months.
